

Amritha Mallikarjun

amritham@upenn.edu

(610)-209-6937

Penn Vet Working Dog Center
3401 Grays Ferry Ave, Bldg 470
Philadelphia, PA 19146

Residency Status: U. S. Citizen

Education

2014-2020	University of Maryland, College Park , College Park, MD Ph.D. in Neuroscience and Cognitive Science Thesis: The use of the domestic dog (<i>Canis familiaris</i>) as a comparative model for speech perception
2014-2017	University of Maryland, College Park , College Park, MD M.S. in Neuroscience and Cognitive Science
2010-2014	Carnegie Mellon University , Pittsburgh, PA Bachelor of Science in Cognitive Science Additional Major in Human-Computer Interaction

Research Experience

2020-present	Senior Research Investigator, formerly Postdoctoral Researcher Penn Vet Working Dog Center, University of Pennsylvania – develop and execute studies examining complex category learning of odor in domestic dogs (e.g., ovarian cancer, post-traumatic stress disorder, COVID-19, chronic wasting disease) as well as cognitive and behavioral factors that impact category identification and differentiation – train groups of undergraduate interns on lab procedures and research methods 3x a year – serve as a mentor for groups of undergraduate students as they work on current research projects – manage a dynamic team of full and part-time research assistants and college interns – develop and write standards of practice (SOPs) for our operational procedures – perform statistical analyses of large longitudinal data sets containing behavioral and scent detection data – write manuscripts for research projects and supervise writing from students and research assistants involved in projects
--------------	---

	– write competitive grants from federal and independent foundation sources, and develop grant budgets and usage plans
2014-2020	Graduate Research Assistant Professor Rochelle Newman Language Development Lab, University of Maryland, College Park Canine Language Perception Lab, University of Maryland, College Park – developed and executed speech perception and auditory processing studies using developmental behavioral research methods – designed and conducted an EEG study examining neural processing of syntactic ambiguity, including stimulus design, data collection, and building the preprocessing and analysis pipeline (artifact rejection, filtering, epoching) in EEGLab with regression-based ERP analyses in R – began my own comparative research program with dogs and infants – adapted human behavioral research methods for use in dogs to conduct comparative speech perception research – mentored undergraduate students’ independent research projects – used social media and community outreach to recruit over 700 dog owners to bring their dogs in for study participation over 3 years
2013-2014	Assistant Lab Manager Professor Erik Thiessen Infant Language and Learning Lab, Carnegie Mellon University – organized infant scheduling and testing – trained new research assistants to run behavioral infant speech perception studies
2011-2014	Research Assistant Professor Erik Thiessen Infant Language and Learning Lab, Carnegie Mellon University – recruited and scheduled adult and infant subjects – ran infant and adult subjects in speech perception experiments – coded and analyzed behavioral data
Summer 2013	Research Assistant Professor Jeffrey Lidz Project on Children’s Language Learning, University of Maryland – ran 3- and 4-year-olds in an interactive theory-of-mind study – coded and analyzed behavioral data
Summer 2012	Research Assistant Professor Natasha Tokowicz Psycholinguistic Underpinnings of Multilingualism Lab, University of Pittsburgh – ran adult subjects in a longitudinal study connecting working memory to language acquisition rates

Funded Research and Undergraduate Involvement

2026	A combined sensor approach to examine volatile organic compounds as potential markers of canine hemangiosarcoma Co-Investigator PI: Dr. Cynthia Otto Funding Agency: Morris Animal Foundation
------	--

	Amount Awarded: \$211,590 – co-authored grant to examine the volatile organic compound signature of hemangiosarcoma, a deadly canine cancer, with detection canines and analytic methods – approximately five undergraduate students anticipated to assist with this project
2026	Canimetrics learning platform and data collection development Co-Investigator PI: Dr. Cynthia Otto Funding Agency: American German Shepherd Foundation Amount Awarded: \$10,000 – co-authored grant to develop an online learning platform for the PVWDC canine fitness program (Canimetrics) as well as a data collection system to inform research and provide owners and handlers feedback on their dogs’ performance – supervised three undergraduate students that participated in the preliminary development of videos and protocols for Canimetrics, and assisted with beta testing the data collection system
2025-2026	Improving military working dog readiness and performance with a novel cooling technology Co-Investigator PI: Dr. Cynthia Otto Funding Agency: Morris Animal Foundation Amount Awarded: \$211,590 – authored literature review on canine cooling technologies and drafted technical content for Phase II proposal; named as key personnel in project budget – approximately five undergraduate students anticipated to assist with this project
2024-2025	Impact of everyday noise on pet and service dogs’ word recognition Co-Investigator PI: Dr. Rochelle Newman Funding Agency: Association for Professional Dog Trainers Amount Awarded: \$2,500 – co-authored grant to examine the impact of different types of background noise on pet and service dogs’ name recognition – supervised one student who conducted the pilot study for this grant in the use of the headturn preference procedure methodology, data collection, data analysis, and generation of an academic poster
2024-2025	Wild CWD surveillance and detection through signature volatile organic compound identification Co-Investigator PI: Dr. Cynthia Otto Funding Agency: United States Department of Agriculture Amount Awarded: \$243,578 – co-authored grant to characterize signature volatile organic compounds present in CWD-positive and CWD-negative white-tailed deer, and to develop a nonhazardous canine training aid using these signature VOCs – supervised four undergraduate students in data collection, dog handling, sample preparation and maintenance, and the use of our scent detection equipment
2024-2025	Water-based cooling strategies for dogs experiencing exercise-induced hyperthermia Co-Investigator PI: Dr. Cynthia Otto

	Funding Agency: American Kennel Club Canine Health Foundation Amount Awarded: \$90,950 – co-authored grant to examine water-based cooling strategies (e.g., partial body immersion in water, use of a water-soaked towel) to cool dogs experiencing exertional heat stress – supervised nine students (eight undergraduates and one veterinary student) who participated in several different aspects of the study, including data collection, dog handling, prepping materials and supplies, and generating data visualizations
2023-2025	Body condition scoring in dogs: understanding barriers to owners receiving information and improving dog health Co-Investigator PI: Dr. Cynthia Otto Funding Agency: Waltham Foundation Amount Awarded: \$30,839 – co-authored grant to examine how dog owners perceive their dogs’ weight and how to best inform them of healthy practices for their dogs – supervised two undergraduate students in data collection and data maintenance
2023-2024	Monitoring chronic wasting disease with bio-samples and bio-detectors Co-Investigator PI: Dr. Cynthia Otto Funding Agency: United States Department of Agriculture Amount Awarded: \$249,924 – co-authored grant to study methods of identifying ideal dog candidates for chronic wasting disease and other bio-detection needs – Supervised four students in data collection, dog handling, sample preparation and maintenance, and the use of our scent detection equipment
2022-2023	Developing a visual scale of heat-related illness in dogs Co-Investigator PI: Dr. Cynthia Otto Funding Agency: Association for Professional Dog Trainers Amount Awarded: \$2,471 – co-authored grant to examine how well people can identify when dogs are experiencing heat stress – supervised three undergraduate students in this project who participated in different aspects of the study based on their personal interests and skills, including survey generation, stimuli preparation, data analysis, and data visualization

Mentoring Experience

2024	Amir Kaidarov Undergraduate Student in Computer Science Drexel University Project: Prediction of working dog future career from behavioral surveys – provided guidance on algorithm selection, data cleaning, analysis, data interpretation, and presenting machine learning data for different audiences
2023-2024	Amanda Christy Masters Student in Animal Welfare

	University of Pennsylvania Project: Effect of a "quiet hour" on dogs' restfulness and noise levels in a kennel environment – providing guidance on experimental design, data cleaning, analysis, and data visualization for Amanda's master's thesis project
2021-2022	Ila Charendoff Undergraduate Student in Biology Haverford University Project: Assessing different Chronic Wasting Disease training aids for use with detection dogs – mentored Ila through the process of data collection, data organization, statistical analysis, and provided guidance on writing scientific manuscripts for publication – this project was published in <i>Animals</i> – a subsequent follow-up project is under review at the <i>Journal of Wildlife Diseases</i>
2021-2022	Ben Swartz Post-Baccalaureate Research Assistant Project: Canine detection of Chronic Wasting Disease in laboratory and field settings – mentored Ben through the process of data collection, troubleshooting unexpected methodological issues in studies, and provided guidance on writing scientific manuscripts for publication – provided career guidance on resume structure, cover letter writing, and finding jobs related to interdisciplinary interests in environmental science and working dogs – this project was published in <i>Prion</i>
2021-2022	Amanda Collins Undergraduate Student in Biochemical Engineering Drexel University Project 1: Effect of intranasal and oral Bordetella bronchiseptica vaccine on the behavioral and olfactory capabilities of detection dogs Project 2: Canine scent detection of sinonasal-inverted papilloma in blood plasma and nasal secretions – mentored Amanda through the process of experimental design, data collection, analysis of longitudinal datasets, and provided guidance on writing scientific manuscripts for publication – Project 1 was published in <i>Frontiers in Veterinary Science</i> – Project 2 was published in the <i>Journal of Veterinary Behavior</i>
2021	Bridget Ringenwald Veterinary Student University of Pennsylvania School of Veterinary Medicine Project: Individual differences in ovarian cancer detection – mentored Bridget through the process of experimental design, data collection, data analysis, and provided guidance on creating a poster and how to do a poster presentation
2019-present	Laura Grant Undergraduate Student in Animal Sciences University of Maryland, College Park Project: Working and pet dogs' perception of speech in naturalistic background noise

	– mentored Laura in experimental design, subject recruitment, data collection, and data analysis for a project that compared pet and working dogs’ performance at speech-in-noise perception
2019-2020	Chris Taho High School Senior Eleanor Roosevelt High School, Greenbelt, MD Project: The effect of background noise on second-language word learning and recognition in adults – mentored Chris through his high school Research Practicum Internship, where I aided him with stimuli creation, participant testing, data analysis, and visual data representations – provided Chris guidance on college applications and college selection
2015	Kelly Puyear Undergraduate Student in Hearing and Speech Sciences University of Maryland, College Park Project: Online processing of lexical tone by native Mandarin speakers and second language learners of Mandarin – Instructed Kelly in video coding, data analysis, and research poster design for a speech perception project

Skills

Research	Methodology and Analysis – Experimental Design for Auditory and Olfactory Perception Studies – EEG / ERP Data Collection and Analysis – Hierarchical and Mixed-Effects Modeling – Longitudinal Data Analysis – Quantitative Data Analysis – Bayesian Analysis – Behavioral Research Methods
HCI	Human-Computer Interaction – User-Centered Design Research – Qualitative Data Collection (Observation, Interviews, Contextual Inquiry) – Graphic Design
Technology	Computer Programming – R – Python – LaTeX – SPSS
Technology	Computer Software – EEGLab – MS Office Suite (Excel, PowerPoint, Word, Outlook) – Adobe Photoshop – Adobe InDesign

Teaching Experience

10/2025	Guest Lecture: The cocktail party in the domestic dog Instructor: Dr. Alexandra Horowitz Undergraduate Animal Behavior course at Barnard College, New York City, NY.
Spring 2025	Guest Instructor for Cognition, Senses, and Responses I Primary Instructor: Dr. Carlo Siracusa University of Pennsylvania School of Veterinary Medicine, Philadelphia, PA. – lectured on olfaction in companion animals and wrote quiz and test questions on this subject for the midterm and final.
Spring 2025	Co-Instructor for the Clouds and Clocks experimental design course for veterinary students Co-Instructors: Dr. Cynthia Otto and Dr. Enrico Radaelli University of Pennsylvania School of Veterinary Medicine, Philadelphia, PA. – designed guided reading protocols and assignments with structured questions to help students parse research papers, particularly the complex statistical methods that non-experts often find inaccessible – helped develop peer assessment tools for group-based assignments and projects – provided guidance on topics and assignments for student groups, as well as feedback on project proposals and written assignments
2022-2025	Summer Seminars for undergraduate PVWDC interns University of Pennsylvania School of Veterinary Medicine, Philadelphia, PA. – designed and taught a series of interactive seminars each summer for 8-10 research interns on a variety of academic and professional development topics ranging from how to read academic papers, how to write in an academic style, building a resume, finding research opportunities, and applying to graduate school
Fall 2024	Lab Instructor for the Clouds and Clocks experimental design course for veterinary students Primary Instructors: Dr. Cynthia Otto and Dr. Enrico Radaelli University of Pennsylvania School of Veterinary Medicine, Philadelphia, PA. – provided guidance on topics and assignments for student groups in the class, as well as feedback on general project proposals for students – provided feedback on students' written assignments
3/2024	Guest Instructor for the Clouds and Clocks experimental design course for veterinary students Instructor: Dr. Cynthia Otto University of Pennsylvania School of Veterinary Medicine, Philadelphia, PA – provided information on statistical methods as well as feedback on general project proposals for students
11/2021	Guest Lecture: What animal communication has to do with human speech perception Instructor: Dr. Jens Herberholz Undergraduate Animal Behavior course at the University of Maryland, College Park, MD.
4/2021	Guest Lecture: Canine deafness and hearing loss Instructor: Dr. Cynthia Otto

	Human Animal Bond course at the University of Pennsylvania School of Veterinary Medicine, Philadelphia, PA.
11/2020	Guest Lecture: What animal communication has to do with human speech perception Instructor: Dr. Jens Herberholz Undergraduate Animal Behavior course at the University of Maryland, College Park, MD.
11/2019	Guest Lecture: What animal communication has to do with human speech perception Instructor: Dr. Jens Herberholz Undergraduate Animal Behavior course at the University of Maryland, College Park, MD.
11/2018	Guest Lecture: Animal communication Instructor: Dr. Karen Mulak Undergraduate Introduction to Linguistics course at the University of Maryland, College Park, MD.

Papers: Comparative Speech Perception

Under Review	Mallikarjun, A. , and Newman, R. S. Effect of number of background talkers on speech perception in the domestic dog. Under review at <i>Animal Behavior and Cognition</i> .
2024	Mallikarjun, A. , Shroads, E. and Newman, R. S. (2024). Perception of vocoded speech in domestic dogs. <i>Animal Cognition</i> , 27(1), 1-13.

Invited Talks

7/2025	Investigating different skills of bio-detection dogs in lab and field settings. Animal Behavior Society Meeting, Baltimore, MD.
4/2025	Experience-driven differences in dogs’ word recognition in quiet and environmental noise. Joint Symposium for Working K9s, Atlanta, GA.
10/2024	Canine perception of noise-vocoded speech. Mid-Atlantic Seminar on Hearing, College Park, MD.
10/2024	From laboratory to field: Investigating different skills of successful bio-detection dogs. The Wildlife Society annual meeting, Baltimore, MD.
6/2023	Chronic wasting disease detection dogs: Identification of optimal training aids. International Chronic Wasting Disease Symposium, Denver, CO.

6/2023	The impact of auditory noise on dogs. Invited talk for the Training the Disaster K9 Team course, Philadelphia, PA.
2/2023	Speech perception in the domestic dog. Guest lecture for the Boston College Canine Cognition Center lab meeting, Boston, MA.
2/2022	Opioid exposure: Field implications for working dogs. DSTL Working Dog Symposium, Tidworth, UK.
2/2022	A tale of two senses: Examining categorization in olfaction and audition. Indiana University, Bloomington, IN.
10/2021	Canine detection of Chronic Wasting Disease in lab and operational settings. AAVLD / USHA annual conference, virtual presentation.
2/2019	The Canine Language Perception Lab: How infant research can help us learn about dogs. Capital Dog Training Group, Hyattsville, MD.

Posters

10/2022	Charendoff, I., Mallikarjun, A. , Moore, M. B., Gibison, M., Nguyen, E., Swartz, B., Ellis, J., Murphy, L. A., and Otto, C. M. Identification of optimal training aids for chronic wasting disease detection. Poster session presented at the Canine Science Conference, Hamilton, NY.
4/2022	Mallikarjun, A. Individual differences in odor learning styles. Poster session presented at the Penn Vet Working Dog Conference, Philadelphia, PA.
4/2022	Collins, A., Mallikarjun, A. , Verta, A., Hanadari-Levy, A., Chaskes, M. B., Rosen, M. R., ... and Otto, C. M. Canine scent detection of sinonasal inverted papilloma (SNIP) in blood plasma and nasal secretions. Poster session presented at the Penn Vet Working Dog Conference, Philadelphia, PA.
4/2022	Moore, M. B., Mallikarjun, A. , Gibison, M., Swartz, B., Ellis, J., Murphy, L. A., and Otto, C. M. Canine detection of chronic wasting disease in white tailed deer feces in lab and field settings. Poster session presented at the Penn Vet Working Dog Conference, Philadelphia, PA.
11/2019	Mallikarjun, A. and Newman, R. Language discrimination in the domestic dog. Poster session presented at the Psychonomic Society annual meeting, Montreal, QC.
11/2018	Mallikarjun, A. and Newman, R. Domestic dogs' recognition of vowel and consonant mispronunciations in their own names. Poster session presented at the Psychonomic Society annual meeting, New Orleans, LA.
11/2018	Mallikarjun, A. and Newman, R. The cocktail party effect in domestic dogs. Poster session presented at the Psychonomic Society annual meeting, New Orleans, LA.
11/2015	Mallikarjun, A. , Novick, J. M., and Newman, R. Online processing of lexical tone by second language learners of Mandarin. Poster session presented at the Psychonomic Society annual meeting, Chicago, IL.
